GIS in the Enterprise

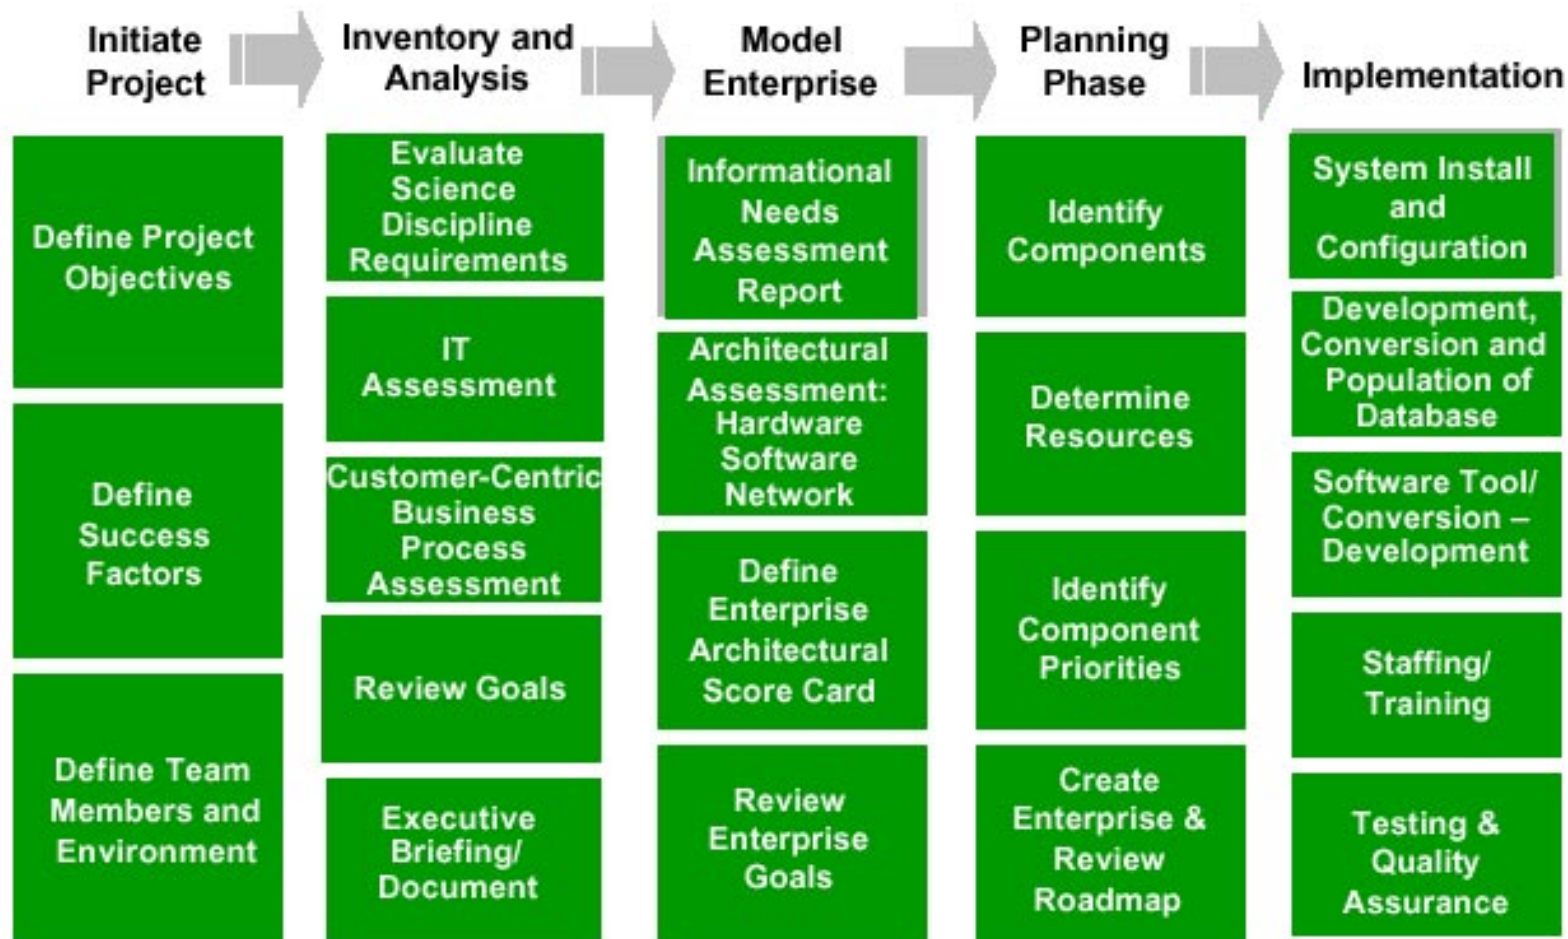

Core Technology

- **RDBMS**
 - Proprietary datasets
 - Business functions
 - FM systems
- **Spatial Database Engine**
 - Stores geographic objects in an RDBMS
- **Web server**
 - For distributed operations
- **Java-based or client-side application**
- **Customized tools**

Key Considerations

- **Data sources and validity**
 - Data migration
 - Data links
 - Spatial data availability
- **Infrastructure**
 - Bandwidth
 - Storage capacity
- **Application migration**
- **Training for spatial thinking**

Project Summaries

- **Facility and Asset Management System, USDA**

Developed Facility Security system and high-interest asset (including aircraft and vehicles) tracking system for 7 USDA agencies. Involved integration of multiple databases and data streams for mapping and managing security status of facilities, internal and external risks or vulnerabilities, asset location and value.

- **Nightlights Global Power Monitoring System**

GIS based system for monitoring global nightlights emissions during Y2K turnover. System integrated near-realtime DMSP satellite data for mapping nighttime visible light, assessing electric service and infrastructure and determining regions with catastrophic outages.

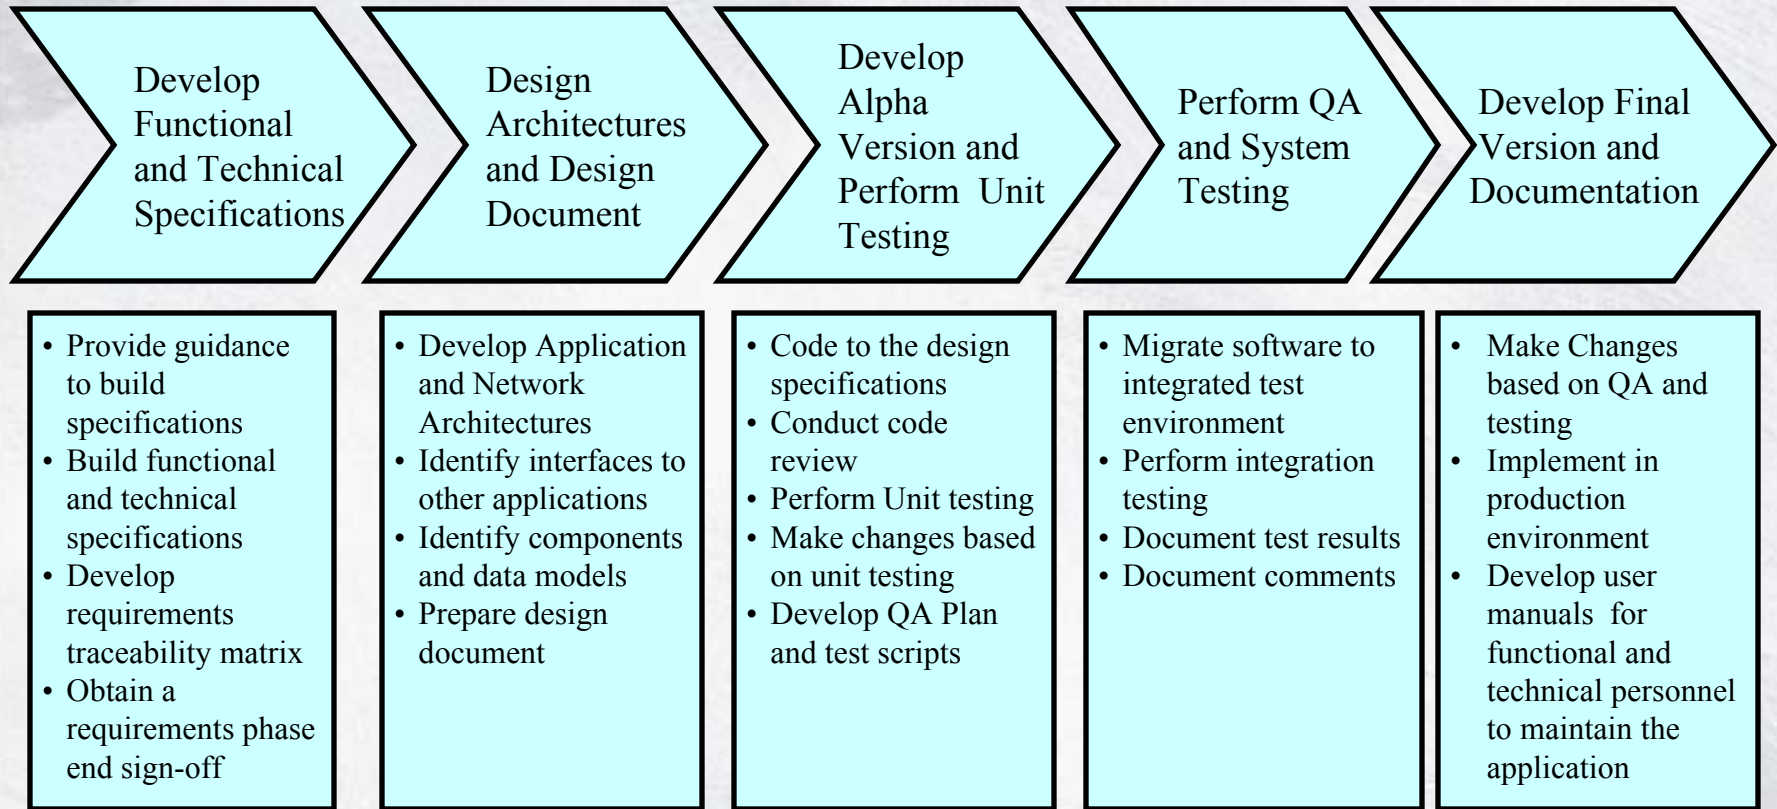

- **State Historical Preservation Office, Idaho**

Web-based Internet Mapping and data collection system for state officers to collect current information on historic cultural site for preservation purposes. Utilized handheld GIS, cellular connectivity, internet-based GIS data delivery and update.

Management Approach - Change Management

CHANGE CONTROL — HIGH LEVEL FLOW

Initiation	Review	Analysis & Approval	Reporting
A change request is initiated by completing the Change Request Form. Any deficiencies corrected or efficiencies gained by the change should be described.	The Change Request Form is reviewed for completeness and the request is approved or rejected. If approved assign an individual or team to the change review task.	The individual/team researches the change in full and develops a full description of the benefits of the proposed change, an impact analysis, and alternatives. If the change is approved, the tasks are added to project responsibilities.	All forms and analysis are forwarded to the project manager and PO/APO for logging. The Project Manager is also responsible for informing all staff affected by any changes.
